Job Position: **ASP.NET MVC Developer**
Location: **Nagpur**
Experience: **5+ years**
Positions: **6**

Responsibilities:

- To ensure software development takes place in accordance with the quality standards established by the company and stated by the customer.
- To do technical analysis based on the client requirements and the project scope definition.
- To define the application data model in accordance to the requirements. All the database design standards are to be adhered.
- To define the system workflows and drive the development to the project completion.
- Translate requirements, application storyboards and use cases into functional applications.
- Code the system modules/tasks as per the coding standards defined.
- Design, build, and maintain efficient, reusable, and reliable code.
- Ensure the best possible performance, quality, and responsiveness of applications.
- Identify bottlenecks and bugs, and devise solutions to mitigate and address these issues.
- Help maintain code quality, organisation, and automatization.
- Develop Unit test cases and perform unit tests.
- Work with front-end team to design pages.
- Deliver the project modules within the targeted deadlines and also maintain good quality code.
- To ensure that each module developed is properly tested with good designed test cases.

Requirements:

- 5+ years of experience in ASP.Net application development.
- Experience with, ASP.NET, MVC 4/5, .Net Core 2.x +, MS SQL Server, MY SQL, Stored Procedure, Crystal Reports, WebAPI and Razor.
- Experience with C#, HTML 5, JavaScript/jQuery, AJAX, CSS, Bootstrap, VB.Net, WinForms.
- Knowledge of Entity Framework 6.x, ADO.NET.
- Experience with MySQL or DynamoDB.
- Experience with REST services.
- Experience with Database design and architecture.
- Experience with consuming third-party libraries and APIs.
- Experience in writing unit tests (e.g., with Nunit or MS test).
- Experience in Education domain will be added advantage.
- Background in Object-Oriented Programming (OOP) and the software development life cycle (SDLC).
- Database design including indexes and data integrity.
- Dependency injection pattern and IoC containers.

- Implementing enterprise application patterns.
- Experience with relational databases (transactional and non-transactional), database architecture, and distributed transaction management.
- Familiarity with the client-side framework jQuery, Angular, React, TypeScript and others.
- Familiarity with Azure Web Apps.
- Familiarity with source control, build processes, and continuous delivery. Familiarity with Git, Git Flow is a plus.
- Experience working in an Agile environment (e.g., Scrum, Kanban).
- Proven execution delivering on performance targets and key operational metrics.
- Ability to work with existing and new projects.
- Ability to understand business requirements and translate them into technical requirements.
- Ability to develop architecture and Software design.
- Attention to detail, thoroughness and an urgency to consistently set and meet deadlines.
- Understanding of the full application development life cycle.
- Ability to create user documentation as well as technical documentation.
- Work with creative team and integrate new design concepts, graphics, and layouts.
- Self-starter and highly motivated, you must be a self-motivated person who can finish quality work with minimal guidance.
- Ability to work well on your own but also collaboratively alongside the other front and back end developers, UX & UI designers, and the client services team.

What we're looking for:

- Excellent problem solving and analytical skills.
- Clear verbal and written communication skills.
- Client Communication.
- Values independence and takes ownership of work.
- Should be willing to learn new technologies.
- Experience in building large scale applications with thousands of users.
